

Designed for comfort,
everywhere and anytime.

PATENTED ENGINE-LESS APE

The engine-less Ape. A patented, one of a kind solution.
A vehicle conceived specifically for being put in closed commercial spaces where motorized vehicles are not allowed.

This particularity makes the Ape TR an ideal mobile workstation for companies that want to open a salespoint in stations, airports, shopping centers, theme parks, outlets and large open or closed exhibition spaces.

The positioning of this vehicle always turns out great. From the moment it gets placed inside a place where a stream of people passes by, attracting customers becomes truly simple.

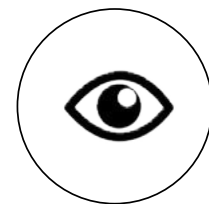

The extreme ease of use and set up speed allow for easy management without a need for highly-trained workers.

The three internal workstations allow for the carrying out of the same tasks that get done inside a permanent location like a restaurant or café. The Ape TR can serve the same number of customers in a commercial space while taking up less space. Additionally, operating costs are nullified.

A FOOD TRUCK FOR THE GLOBAL MARKET

The Ape Piaggio TR[®] can be provided with certified systems for every country. This makes it a flexible alternative and easily manageable compared to classic restoration services.

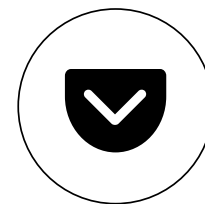

PATENTED

An original, patented and one of a kind vehicle.

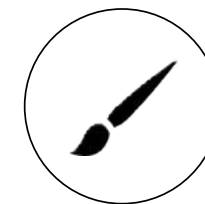

KIOSK

Can be placed in all commercial spaces where vehicles with engines are not allowed.

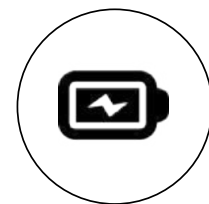

ERGONOMIC

Its ergonomics are perfect for the sale of any product.

- Towing hook

OPTIONAL

- Logo milling
- Signs
- Shelves
- Whiteboards
- External lighting
- Customized adhesive artwork

FAQ

- If I wanted it with an engine?

The TR Model has been patented exclusively without an engine. If you need an Ape for driving, check out the Ape V-Curve model ([Ape V-Curve link](#))

- How can I move it?

For short distances, it's enough to push on it by hand. If you need to move it far distances, you will need a tow or trailer.

- Does it fit through all doors?

Yes! It has been designed to enter any commercial area and bypass potential architectural barriers.

- Can I open the back wall?

It isn't necessary. The structure has been created to manage the flow of customers from just one side, so as to make the workers' jobs easier.

- How can I use the third wall?

You can use it in other ways. For example, by communicating your brand and product, by affixing some useful accessories for your clients, or renting the backwall space as advertising space for other brands.
